SE Lab2 -Jira

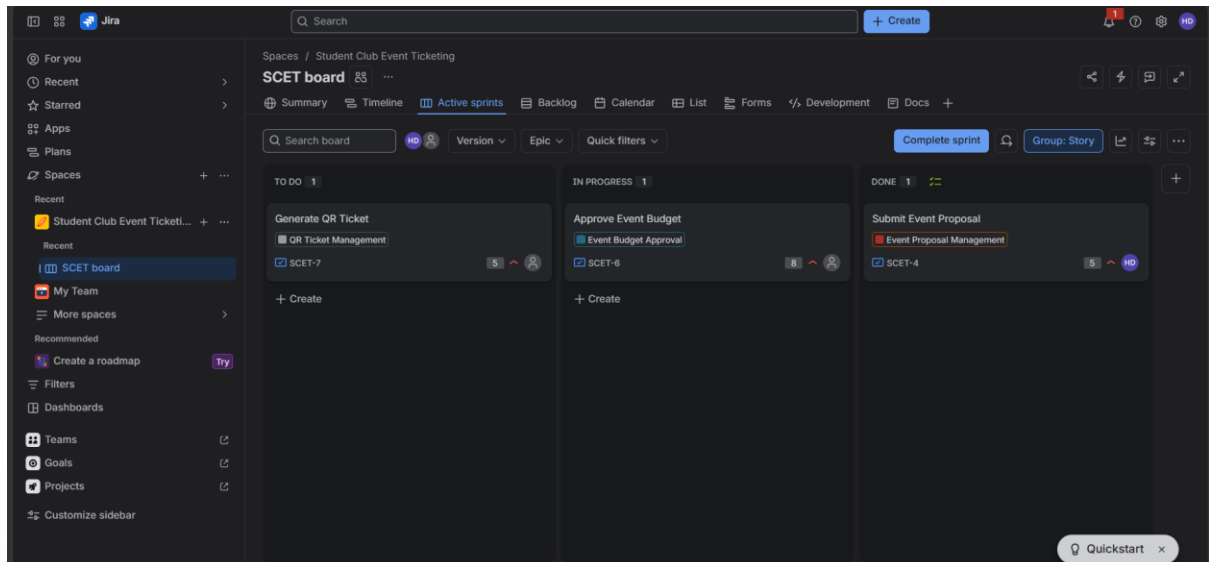

Jira backlog with Epics and User Stories-

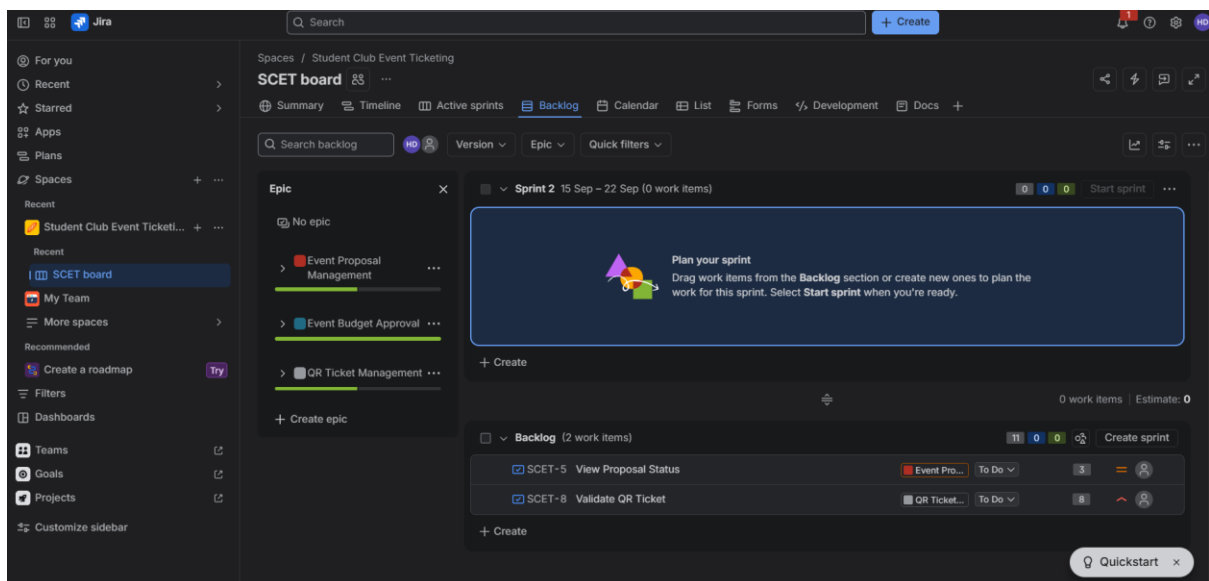

Story point assignments-

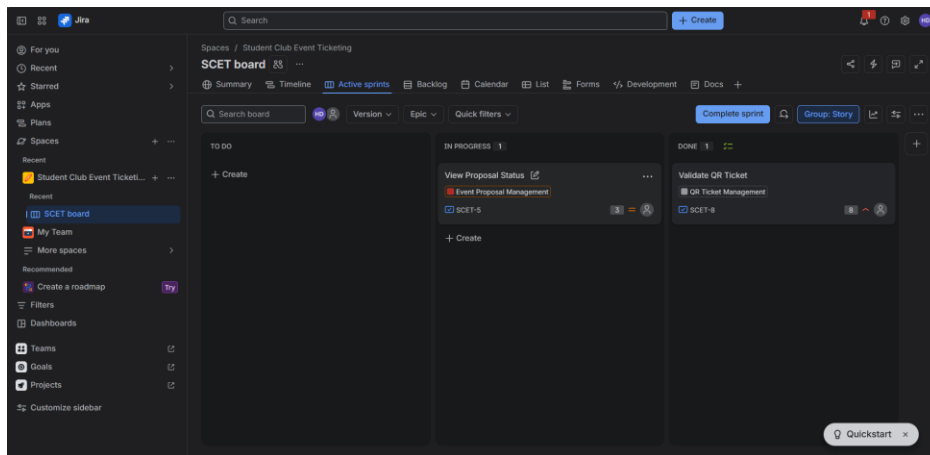

Sprint board (Active Sprint view) (Sprint 1)

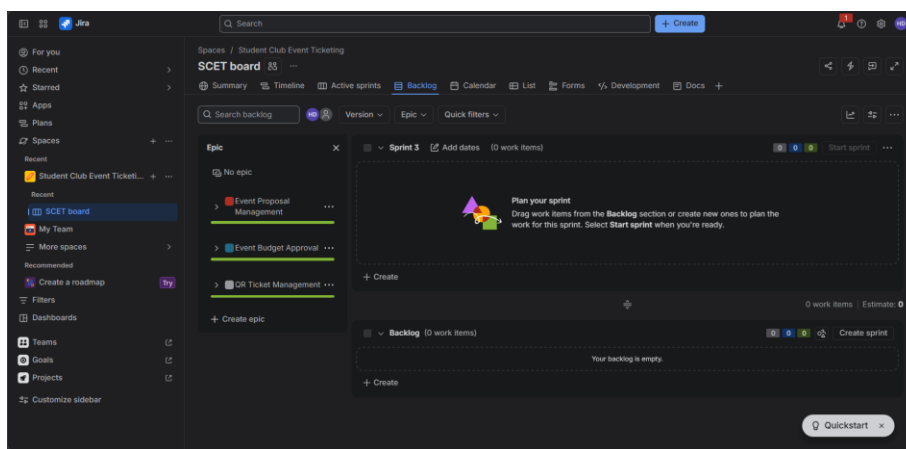

Sprint 1 completed-

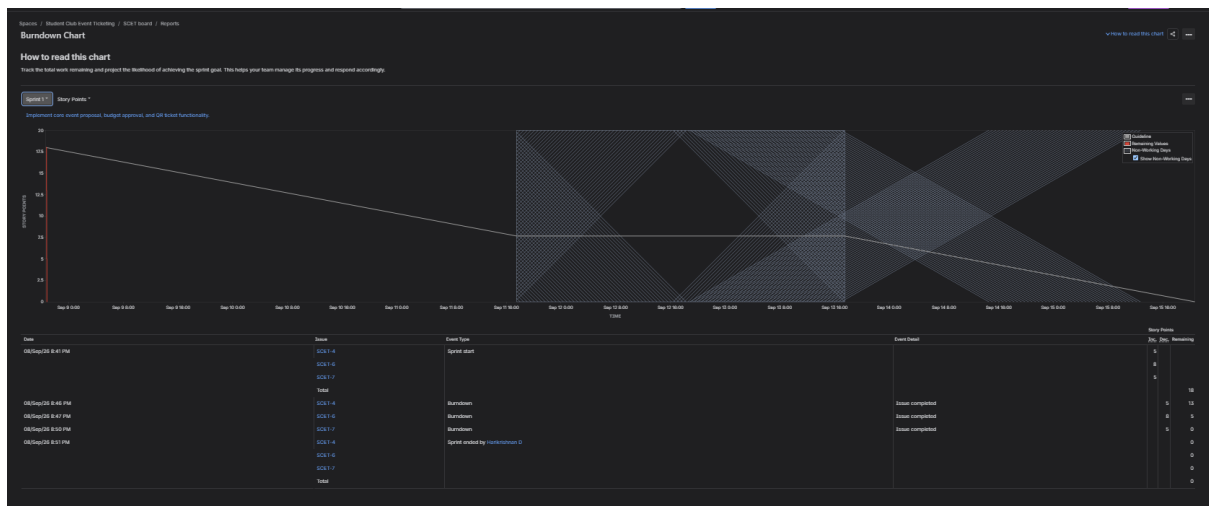

Sprint board (Active Sprint View) (Sprint 2)-

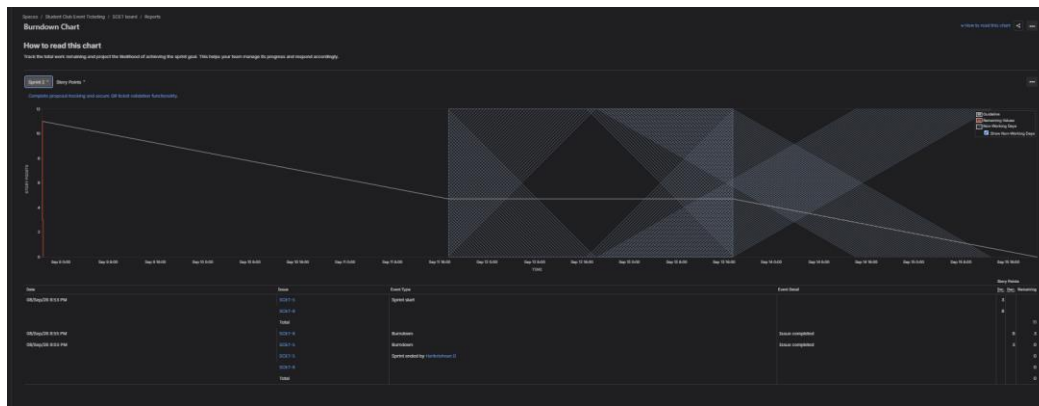

Sprint 2 completed-

Burndown chart (Sprint 1)

Burndown chart (Sprint 2)-

Reflection-

1. Did your estimations reflect the actual effort?

The story point estimates provided a reasonable representation of the relative effort of the user stories. The simpler “View Proposal Status” story was estimated at 3 points, while more complex functionality such as “Approve Event Budget” and “Validate QR Ticket” was estimated at 8 points because they involve multiple stages, validation, and greater complexity. Since this was a simulated sprint, the story points were mainly useful for comparing the relative difficulty of the work.

2. Was your backlog well-prioritized?

Yes. The backlog was prioritized based on the importance of the functionality to the overall system. Core functionality such as submitting event proposals, approving event budgets, generating QR tickets, and validating tickets was given High priority. Viewing proposal status was given Medium priority because it provides tracking and transparency but is less critical to the basic operation of the system.

3. How did your simulated sprint align with your plan?

The simulated sprints generally aligned with the planned backlog. Sprint 1 focused on the core event proposal, budget approval, and QR ticket generation functionality. Sprint 2 focused on proposal status tracking and QR ticket validation. The user stories were moved through To Do, In Progress, and Done to simulate development progress.

4. What insights did the burndown chart give about your team's capacity?

The burndown chart showed how the estimated work decreased as user stories were completed. It provided a visual indication of whether the team was progressing toward completing the planned sprint work. Since this was a simulated exercise, the chart mainly demonstrated how completed story points affect remaining sprint work and how the team can use this information to evaluate its capacity and progress.
